

Internal IT Notice – DNS Record Review

Date: 11 May 2026

From: Internal IT Team

Subject: DNS Record Notes and Temporary Retention

The Internal IT team would like to advise staff that we have recently experienced a number of DNS-related issues affecting parts of our internal infrastructure and service resolution.

As part of ongoing troubleshooting and remediation work, several legacy and temporary DNS records have intentionally been left in place within the environment. These records are currently being retained as operational notes and reference points to assist with diagnostics, rollback procedures, and service continuity during the review period.

Please note the following:

- Some DNS entries may appear duplicated, outdated, or non-standard.
- Certain records are being preserved temporarily for documentation and audit purposes.
- Internal systems should continue to function normally while remediation work is completed.
- IT staff should avoid removing or modifying DNS entries unless specifically authorised by the Infrastructure or Network team.

We are continuing to monitor the environment closely and will remove or consolidate unnecessary records once the review has been fully completed.

If you encounter any unusual connectivity or name resolution issues, please report them through the Internal IT support process.

Thank you for your cooperation and patience while these improvements are carried out.

- Internal IT Team
